

Lift Station Addition, Force Main Upsizing, and Gravity Sewer Extension

Cape Girardeau, MO

Year: 2014

Contact: Andrew Stone, Public Works

Client: City of Cape Girardeau

Phone:

BFA provided surveying, permitting, design plans, and specifications for this project which involved 3600 feet of gravity sewer extension, 17 manhole structures, stubs for future connections, new lift station, demolition of a temporary lift station, and upsizing of the temporary small diameter force main to a new larger diameter force main. Additionally, BFA provided alternative options for a stand-alone back-up power generator and provisions for an additional pump to be added to the lift station to accommodate future flow requirements.
