Project Highlights

Planning Services

BFA provided planning services to the City of Twin Oaks to assist them with their long-term capital planning goals. BFA helped line out projects over the next five years based on available funds and the condition of the current infrastructure. Like many cities Twin Oaks has numerous projects they want to accomplish, but not all of them are feasible. BFA has provided cost estimates, design concepts, and insight to assist in prioritizing those projects in a logical, cost effective way. Through public involvement at workshops and board meetings. BFA continues to take into consideration not only the city’s opinion, but also the residents. The example project below is scheduled as the first project in their five year plan.
